

CMM306 Speaker built-in box for concrete casting with mineral fibreboard

Product information:

The CMM306 is a built-in housing for flush mount installation of loudspeakers in concrete structures. The construction with mineral fiberboard plate allows customized cut-outs in various diameters or shapes for installation of loudspeakers (or lighting fixtures). Cast in-place or integration in precast factories is both possible.

The mineral fiberboard plate allows cutouts with diameters up to ~ 280 mm, while a maximum built-in depth of 110 mm guarantees compatibility with a large number of in-ceiling loudspeakers. The synthetic enclosure is made out of halogen free and fire (up to 650°C) resistant materials. Entries for both 2xM20 and 2xM25 cables are provided.

Product Features:

| Cut-out measurement | 11.024 " (Ø) |
|---------------------|---|
| Dimensions | 12.047 × 4.72 " (Ø × D) |
| Built-in depth | 4.33 " |
| Construction | Mineral fiberboard (Material front) |
| | Synthetic - Halogen free & temperature resistant (Material box) |
| | Galvanized metal plate - Grounded (Material cover) |
